Biological molecules

20 questions: 10 multiple choice, 10 structured.

---

1 · Part 1 Core Biological molecules [1]

Which chemical element is found in proteins but not in carbohydrates or fats?

A carbon

B nitrogen

C oxygen

D hydrogen

---

2 · Part 1 Core Biological molecules [1]

Which row shows a large molecule and the smaller molecules it is made from?

	large molecule	smaller molecules
A	cellulose	amino acids
B	glycogen	fatty acids and glycerol
C	protein	glucose
D	starch	glucose

3 · Part 1 Core Biological molecules [1]

Samira tests a sample of a breakfast cereal for three nutrients.

- After adding iodine solution, the sample stays orange-brown.
- After heating with Benedict's solution, the mixture stays blue.
- After adding biuret solution, the mixture turns purple.

Which of the nutrients tested is present in the cereal?

A protein only

B protein and reducing sugar

C starch and protein

D starch only

4 · Part 1 Core Biological molecules [1]

Which row correctly describes a food test and its positive result?

	test	method	positive result
A	iodine solution	add a few drops to the sample	orange-brown colour
B	Benedict's solution	add to the sample and leave at room temperature	brick-red colour
C	ethanol emulsion	shake the sample with ethanol, then pour the ethanol into water	milky white emulsion
D	DCPIP	add the sample drop by drop to DCPIP	colourless liquid turns blue

5 · Part 1 Core Biological molecules [1]

Four drinks were tested for vitamin C. Each drink was added drop by drop to 1 cm^3 of DCPIP solution until the blue colour disappeared.

drink	number of drops needed
1	18
2	6
3	25
4	11

Which drink contains the highest concentration of vitamin C?

A drink 2

B drink 4

C drink 1

D drink 3

6 · Part 1 Core Biological molecules [1]

Which statement about starch, glycogen and cellulose is correct?

A They are all made from amino acids.

B They are all made from glucose.

C They all contain nitrogen.

D Only starch contains carbon.

7 · Part 1 Core Biological molecules [1]

Four sugar solutions, W, X, Y and Z, were each heated with the same volume of Benedict's solution for the same time. The colours at the end were:

solution	colour after heating
W	green
X	brick red
Y	blue
Z	yellow

Which list shows the solutions in order of increasing concentration of reducing sugar?

A X, Z, W, Y

B W, Y, Z, X

C Y, Z, W, X

D Y, W, Z, X

8 · Part 1 Extended Biological molecules [1]

Which statement describes the structure of a DNA molecule?

A one strand of bases coiled into a helix

B two strands held together by bonds between glucose molecules

C two strands coiled into a double helix, held together by bonds between pairs of bases

D two strands in which base A pairs with base C, and base T pairs with base G

9 · Part 1 Extended Biological molecules [1]

In a sample of DNA, 24% of the bases are C.

What percentage of the bases in the sample are A?

A 24%

B 26%

C 48%

D 52%

10 · Part 1 Core Biological molecules [1]

The white powder in a jar contains only one type of biological molecule. The molecule is a carbohydrate, a fat or a protein.

Chemical analysis shows that the powder contains carbon, hydrogen, oxygen and nitrogen.

Which food test result is expected for this powder?

A Biuret solution turns purple.

B Iodine solution turns blue-black.

C The ethanol emulsion test gives a milky white emulsion.

D Benedict's solution turns brick red after heating.

11 · Part 1 Core Biological molecules [5]

Leila eats a breakfast of oats and milk. Oats are rich in starch. Milk contains protein and fat.

(a) State the three chemical elements that are found in both carbohydrates and fats. [1]

(b) Starch is made from glucose. State the name of one other large carbohydrate molecule that is made from glucose. [1]

(c) State the name of the smaller molecules that join together to make proteins. [1]

(d) Fats are made from two types of smaller molecule. State the names of both types. [2]

12 · Part 1 Core Biological molecules [4]

Tomas wants to find out whether a sample of crushed rice contains starch.

(a) State the name of the reagent Tomas should add to the rice. [1]

(b) State the colour Tomas will see if starch is present. [1]

(c) State the colour Tomas will see if starch is not present. [1]

(d) Starch is a large molecule. State the name of the smaller molecule that starch is made from. [1]

13 · Part 1 Core Biological molecules [6]

Kofi is given a sample of crushed peanuts. He uses the ethanol emulsion test to find out whether the peanuts contain fat.

(a) Describe how Kofi should carry out the ethanol emulsion test on the crushed peanuts. [2]

(b) State the result Kofi will see if fat is present. [1]

(c) Kofi repeats the test using distilled water in place of the crushed peanuts. Suggest why he does this. [1]

(d) Kofi also wants to find out whether the peanuts contain protein. Describe how he should test for protein and state the result if protein is present. [2]

14 · Part 1 Core Biological molecules [5]

Priya compares the vitamin C content of fresh orange juice and orange juice that has been boiled and then cooled. She adds each juice slowly from a syringe to 1.0 cm^3 of DCPIP solution until the DCPIP changes colour. She does this three times for each juice.

juice	trial 1 volume / cm^3	trial 2 volume / cm^3	trial 3 volume / cm^3	mean volume / cm^3
fresh	1.2	1.4	1.3	1.3
boiled	2.5	2.7	2.9	

(a) State the colour change of DCPIP when enough vitamin C is added. [1]

(b) Calculate the mean volume of boiled juice needed. [1]

(c) State which juice contained the higher concentration of vitamin C. Explain your answer using the data in the table. [2]

(d) Suggest one variable that Priya should keep the same in every trial. [1]

15 · Part 1 Extended Biological molecules [4]

DNA is found in the nucleus of a cell.

(a) Describe the structure of a DNA molecule. [3]

(b) One student writes: "In DNA, base A always pairs with base G."

State a corrected version of this sentence. [1]

Topical Hub

16 · Part 1 Extended Biological molecules [4]

Scientists analysed the DNA from the cells of a wheat plant. They found that 27% of the bases in the DNA were A.

(a) State the percentage of the bases that were T. Explain your answer. [2]

(b) Calculate the percentage of the bases that were G. Show your working. [2]

17 · Part 1 Core Biological molecules [6]

There are four unlabelled tubes, J, K, L and M. One tube contains glucose solution, one contains starch suspension, one contains protein solution and one contains distilled water. A student tests a sample from each tube.

tube	iodine solution	Benedict's solution, after heating	biuret solution
J	orange-brown	blue	purple
K	blue-black	blue	blue
L	orange-brown	brick red	blue
M	orange-brown	blue	blue

(a) Identify the contents of each tube, J, K, L and M. [4]

Topical Hub
topical-hub.pages.dev

(b) The student then tests a fifth liquid, N. The iodine solution turns blue-black, the Benedict's solution turns orange after heating and the biuret solution stays blue.

State which nutrients liquid N contains. [2]

18 · Part 1 Core Biological molecules [6]

Nadia mixes a starch suspension with a liquid extracted from germinating barley seeds. She keeps the mixture at 35 °C. She tests samples of the mixture with iodine solution and with Benedict's solution at the start and after 30 minutes.

time / min	iodine solution	Benedict's solution, after heating
0	blue-black	blue
30	orange-brown	orange

(a) Explain the change in the result of the iodine test. [2]

(b) Explain the change in the result of the Benedict's test. [2]

(c) Nadia repeats the experiment using a suspension of cellulose instead of starch. After 30 minutes the Benedict's test still stays blue.

Suggest what this result shows about the liquid from the barley seeds. [1]

(d) Nadia also heats a sample of the barley seed liquid on its own with Benedict's solution. It stays blue.

Suggest why she carries out this test. [1]

19 · Part 1 Extended Biological molecules [6]

This section of a DNA molecule has 10 bases on each strand, 20 bases in total. The order of bases on strand 1 is shown.

Strand 1: C G A T T A C G G A

(a) State the order of bases on strand 2. [1]

(b) Calculate the percentage of the 20 bases in this section that are C. Show your working. [2]

(c) When this DNA is heated to a high temperature, the two strands separate from each other, but each strand stays in one piece.

Suggest which bonds are broken. Explain your answer. [2]

(d) Explain why the number of A bases in the whole section is equal to the number of T bases. [1]

20 · Part 1 Core Biological molecules [6]

Diego tests extracts from bananas at three stages of ripeness for starch and for reducing sugar. He uses the same mass of banana to make each extract.

stage of banana	iodine solution	Benedict's solution, after heating
unripe (green skin)	blue-black	green
ripe (yellow skin)	blue-black	orange
overripe (brown skin)	orange-brown	brick red

(a) Describe how Diego should carry out the Benedict's test on each extract. [2]

(b) Describe how the starch and reducing sugar content of the banana change as it ripens. [2]

(c) State two variables, other than the mass of banana, that Diego should keep the same so that the Benedict's results can be compared fairly. [2]
